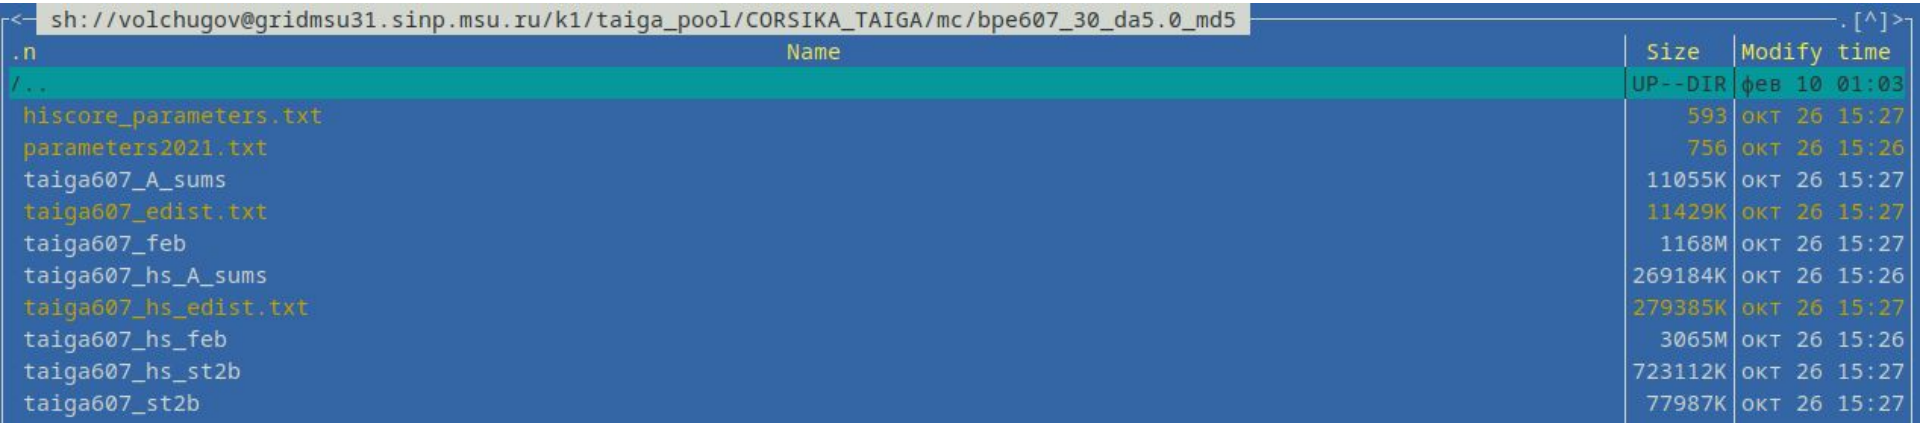
Внутри папки с моделированием:



2021 в названии файла parameters2021.txt указывает на использование в моделировании новых конусов(при отсутствии 2021 - конуса старые)

Фрагмент описания файла моделирования(с окончанием _feb)

Dear collegues,
The format of files ending in "_feb" and "_stb" is the following:
Header for all telescope/hiscore station events:

int32 N_run - number of CORSIKA event
int32 N_scattering - number of random shower core scattering (0-9)
int32 N_telescope - number of either telescope (always 0 in first MC stage) or hiscore station (0-44)
int32 N_photoelectrons - total number of photoelectrons in that telescope or station
double E - primary energy[eV]
double theta - primary zenith angle [radian]
double phi - primary azimuth angle [radian] (for some reason 180deg-phi is the angle as seen in reconstruction - consider it as taking the angle from different axis in different direction)
double X_core [mm] (zero, because CORSIKA move the telescope/stations instead of the shower)
double Y_core [mm]
double Z_core [mm]
double H_1st_interaction [mm]
double particle_type (1 - gamma, 14 - proton, 5626 - iron)
double Xmax [g/cm^2] - depth of shower maximum
double Hmax [mm] - height of shower maximum
double X_telescope [mm] - coordinate of telescope/station
double Y_telescope [mm]
double Z_telescope [mm]
double X_offset [mm] - telescope/station coordinate offset from random shower core scattering (should be used to move shower core by -X_offset instead)
double Y_offset

Моделирование после введения триггера телескопа и фона
